-I-FUNCTION: Receptor for cysteinyl leukotrienes mediating bronchoconstriction of individuals with and without asthma. Stimulation by LTD4 results in the contraction and proliferation of smooth muscle, edema, eosinophil migration and damage to the mucus layer in the lung. This response is mediated via a G-protein that activates a phosphatidylinositol-calcium second messenger system. The rank order of affinities for the leukotrienes is LTD4

"Identification of a murine cyste
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            -I- SUBCELLULAR LOCATION: Integral membrane protein.
-I- ALTERNATIVE PRODUCTS: 2 isoforms; 1/long form (shown here) and 2/short form; are produced by alternative splicing.
-I- TISSUE SPECIFICITY: Widely expressed, with higher expression in the lung and skin, intermediate levels in the heart, kidney and stomach and lower levels in several other tissues. Isoform 1 is the most abundant form in all tested tissues.
-I- MISCELLANEOUS: MK-571, a selective antagonist, was shown to inhibit eosinophilia, bronchial hyperreactivity and microvascular leakage. Zafirlukast (Accolate) and pranlukast (Onon) were also shown to be selective antagonists.
-I- SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            FUNCTION: Receptor for cysteinyl leukotrienes mediating constriction of the microvascular smooth muscle during an inflammatory response. This response is mediated via a G-protein that activates a phosphatidylinositol-calcium second messenger system. The rank order of affinities for the leukotrienes is the LTC4 >> LTB4.

R; Webb, T.E.; Kaplan, M.G.; Barnard, E.A.
Biochem. Biophys. Res. Commun. 219, 105-110, 1996
A; Title: Identification of 6H1 as a P2Y purinoceptor: P2
A; Reference number: JC4618; MUID:96190677
A; Accession: JC4618
A; Molecule type: mRNA
A; Residues: 1-308 <WEB>
A; Cross-references: GB:L06109; NID:g304383; PIDN:AAB0658
A; Experimental source: T-cells
C:Comment: This receptor plays a role in T-cell activation
